

SafePoint Station

The new **SafePoint** from SÖHNGEN® is a wall mounted station consisting of 3-key infection protection products, indispensable in the battle to prohibit the spread of viruses, bacteria and fungi in the work environment.

In an era of SARS, Avian and Swine influenza, it makes perfect sense to include a **SafePoint** System in your health and safety planning, alongside the classic First Aid Case and fire extinguisher.

The **SafePoint** System includes:

- Dispenser with 100 Vinyl gloves, lightly powered DIN EN 455
- Dispenser with 100 face masks DIN EN 14683
- 1000 ml Sterilium hand disinfectant with nozzle

Whether in the company, office, doctor's practice or hospital, the new 3-in-1 SafePoint system is an inexpensive, compact and sensible addition to the surroundings.

The wall mounted station is a once-off purchase and the products can be easily replaced from drugstores and similar retail outlets.

Stocking infection protection products is an active contribution in the fight to disrupt the spread of viruses and bacteria as well as offering protection to workers and colleagues.

More information on the SÖHNGEN® **SafePoint** can be found on our website under: www.soehngen.com
